Understanding Math Talk Moves: A Guide to Enhancing Mathematical Discourse in the Classroom

Math talk moves are strategic classroom practices designed to promote meaningful mathematical discussions among students. These moves foster a collaborative learning environment where students articulate their reasoning, challenge ideas, and deepen their understanding of mathematical concepts. Implementing effective math talk moves can transform a traditional math classroom into an engaging space where critical thinking and communication thrive.

What Are Math Talk Moves?

Definition and Purpose

Math talk moves are specific, intentional strategies teachers use to facilitate student-led conversations about mathematics. These moves help students articulate their thinking, listen to peers, and develop reasoning skills. The primary goal is to shift classroom dynamics from teacher-centered instruction to student-centered dialogue.

Core Principles of Math Talk Moves

- Encouraging students to justify their answers
- Promoting respectful listening and responding
- Building a classroom culture where multiple strategies are valued
- Fostering critical thinking and reasoning skills

Key Math Talk Moves and How to Implement Them

1. Revoicing

This move involves the teacher restating a student's idea in their own words to clarify understanding and validate the student's contribution. It also provides other students with a clear understanding of different reasoning paths.

- Example: "So, you're saying that when you added the two numbers, you combined the tens first?"

2. Rephrasing

Similar to revoicing, rephrasing asks students to restate a peer's idea, encouraging active listening and comprehension.

- Example: "Can you explain your classmate's strategy in your own words?"

3. Press for Reasoning

This involves asking students to explain their thinking explicitly, prompting deeper reasoning.

- Example: "Can you tell us how you arrived at that answer?"

4. Press for Multiple Strategies

Encourages students to share different ways to solve the same problem, demonstrating flexibility in thinking.

- Example: "Can someone share a different method to solve this problem?"

5. Look for and Comment on Structural Features

This move guides students to analyze the structure of mathematical arguments or solutions.

- Example: "What pattern do you notice in these numbers?"

6. Summarize or Synthesize

Helps students articulate the main ideas or strategies discussed, consolidating understanding.

- Example: "Can someone summarize the different approaches we've seen?"

Benefits of Using Math Talk Moves in the Classroom

Teacher: "Great revoicing! Now, let's hear from someone who used a different strategy."

Scenario 2: Press for Multiple Strategies in an Algebra Unit

Teacher: "Who can share a different way to solve for x in this equation?"

- Student A: "I used inverse operations to isolate x ."
- Student B: "I factored the quadratic to find the solutions."

Challenges and Tips for Successful Implementation

What Are Math Talk Moves?

Math talk moves are specific, scripted conversational strategies teachers use to facilitate meaningful mathematical discussions. Originating from research in mathematics education and discourse, these moves serve as pedagogical scaffolds to guide students in articulating their thinking, questioning ideas, and collaboratively constructing mathematical understanding.

At their core, math talk moves are designed to:

- Encourage all students to participate in mathematical conversations.
- Promote precise, mathematical language.
- Help students clarify, justify, and refine their reasoning.
- Foster a classroom culture where multiple strategies and perspectives are valued.

These moves are adaptable across grade levels and mathematical topics, making them versatile tools for promoting active learning.

Core Math Talk Moves and Their Purpose

Below are some of the most commonly used math talk moves, along with their purpose and examples:

- Revoicing

Purpose: To check understanding and model precise mathematical language by restating a student's idea.

How it works: The teacher repeats or paraphrases a student's response, sometimes adding clarifications or corrections.

Example:

Student: ?I think the answer is 14.?

Teacher: ?So, you're saying that the total is 14??

- Rephrasing or Restating

Purpose: To encourage students to clarify their thinking, often prompting elaboration.

How it works: The teacher asks the student to restate their idea in different words or to explain it more clearly.

Example:

Teacher: ?Can you tell me that in a different way??

Student: ?I added 7 and 7 to get 14.?

- Press for Reasoning

Purpose: To prompt students to explain their thinking more deeply, fostering justification.

How it works: The teacher asks questions like "Why do you think that?" or "Can you tell me how you know?"

Example:

Teacher: "Can you tell me how you figured that out?"

Student: "Because I counted all the candies in the jar."

- Use of Wait Time

Purpose: To give students time to think and formulate their responses, ensuring more thoughtful participation.

How it works: After posing a question, the teacher pauses before calling on students.

Tip: Incorporate intentional silence to allow students to process and respond.

- Agree or Disagree

Purpose: To promote reasoning by encouraging students to agree or disagree with peers' ideas, and to justify their stance.

How it works: The teacher prompts students to respond to a peer's statement.

Example:

Teacher: "Does everyone agree with that? Why or why not?"

Student: "I disagree because I think the answer is different."

- Sophisticated Revoicing

Purpose: To extend student ideas by adding mathematical precision or context.

How it works: The teacher elaborates on a student's statement to deepen understanding.

Example:

Student: "The problem is hard."

Teacher: "So, you're saying that solving the problem requires careful thinking because it has multiple steps?"

Implementation:

- Teacher asks: "Who can tell me what operation to use?"
- Student suggests subtraction.
- Teacher uses Revoicing: "So, Emma started with 12 apples, and she gave away 5. You're thinking we should subtract 5 from 12, right?"
- Student responds: "Yes."
- Teacher presses: "Can you explain why subtracting is the right choice here?"

Result:

Students articulate reasoning, practice mathematical language, and understand the problem context.

Example 2: Multiplication Strategy Sharing

Scenario:

Students are exploring different strategies for multiplying 6×7 .

Implementation:

- Teacher asks: "Can someone share a way they solved this?"
- Student explains: "I doubled 6 to get 12, then added 6 to 12 to get 18, and then added another 6 to get 24."
- Teacher Rephrases: "You're using repeated addition, adding 6 seven times, and breaking it

down into steps. Is that right??

- Class discusses different strategies, fostering a rich mathematical conversation.
