Question What are the main parts of a lathe machine and their functions? The main parts of a lathe machine include the bed (provides support), headstock (houses the motor and spindle), tailstock (supports the other end of the workpiece), carriage (holds the tool post and moves the tool), and the lead screw (used for threading). Each part plays a vital role in ensuring precise machining operations. **Answer** How do you perform a facing operation on a lathe machine? To perform a facing operation, first secure the workpiece in the chuck, align it properly, and set the tool at the correct height. Then, move the carriage towards the workpiece and feed the tool radially across the face of the workpiece while rotating the spindle, creating a smooth, flat surface. What is the purpose of manually adjusting the speed of the lathe machine? Manual speed adjustment allows the operator to select an appropriate spindle speed based on the material and cutting operation. Proper speed ensures good surface finish, prevents tool wear, and avoids workpiece damage or vibration. Explain the difference between rough turning and finishing turning in lathe operations. Rough turning involves removing large amounts of material quickly to shape the workpiece roughly to the desired size, often with higher feed rates and lower surface finish requirements. Finishing turning is performed after roughing to produce a smooth surface, using finer feeds and slower speeds for better surface quality. What safety precautions should be taken while operating a lathe machine? Operators should wear safety goggles and avoid loose clothing or jewelry, secure all tools and

workpieces properly, keep the work area clean, and ensure the machine guard is in place. Additionally, they should turn off the machine before making adjustments and be cautious of rotating parts to prevent injuries.
