Overview of Fundamental Concepts in Accounting

The Basic Accounting Equation

At the heart of accounting lies the fundamental accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Owner's Equity}$$

This equation reflects the relationship between what a business owns and owes, serving as the

foundation for all accounting practices.

Double-Entry System

The double-entry system is a bookkeeping method where every transaction affects at least two accounts, maintaining the balance of the accounting equation. It involves:

- Debits
- Credits

For every debit entry, there must be a corresponding credit entry, ensuring the books are always balanced.

Accrual vs. Cash Basis Accounting

- Accrual Accounting: Recognizes revenues and expenses when they occur, regardless of cash flow.
- Cash Basis Accounting: Records transactions only when cash is received or paid.

Shaw emphasizes the importance of accrual accounting for providing a more accurate picture of a company's financial health.

Core Components of Accounting (As Covered in Shaw)

- Financial Statements

Financial statements are the primary outputs of accounting, providing a snapshot of an entity's financial position and performance.
