Components of the Mercury Force Single Ram Tilt Trim System

Understanding the key parts of the tilt trim system is crucial for maintenance and troubleshooting. The main components include:

Hydraulic Cylinder (Ram)

The single hydraulic piston that extends and retracts to tilt or trim the motor. It converts hydraulic pressure into linear motion, adjusting the motor's angle.

Hydraulic Pump

Usually electric, the pump supplies hydraulic fluid under pressure to the cylinder. It is activated via a switch or control panel.

Control Switches

Typically located on the boat's console or steering area, these switches allow the operator to raise or lower the motor smoothly.

Hydraulic Fluid Reservoir

Stores the hydraulic fluid needed for operation. Maintaining proper fluid levels is essential for system performance.

Hoses and Fittings

Transport hydraulic fluid between the pump, reservoir, and cylinder. They must be free of leaks and damage.

Electrical Components

Includes wiring, relays, and switches that power and control the hydraulic pump.
