## Sample Wards Simulating Urinalysis Lab Activity Answers

Below are typical sample questions with detailed answers, serving as a guide to understanding the expected responses in simulated exercises.

### Question 1: Physical Examination

Q: A urine sample appears cloudy with a yellow-green tint. The specific gravity is 1.015. What might this indicate?

A: The cloudy appearance suggests the presence of particulate matter such as bacteria, white blood cells, or crystals. The yellow-green tint could be due to the presence of bilirubin or bacterial pigments. A specific gravity of 1.015 indicates dilute urine, which may be associated with hydration or certain renal conditions. Overall, this could point toward a urinary tract infection or liver-related issues, warranting further chemical and microscopic analysis.

### Question 2: Chemical Analysis

Q: A reagent strip shows positive results for nitrites and leukocytes but negative for glucose and protein. What is the likely diagnosis?

A: Positive nitrites and leukocytes are indicative of a bacterial urinary tract infection, especially bacteria that reduce nitrates to nitrites. The absence of glucose suggests no diabetic ketoacidosis or hyperglycemia, and the negative protein indicates no significant renal impairment at this stage. The diagnosis is most consistent with a UTI.

### Question 3: Microscopic Examination

Q: The microscopic analysis reveals numerous red blood cells (RBCs) and white blood cells (WBCs), along with bacteria. What condition does this suggest?

A: The presence of RBCs and WBCs along with bacteria strongly suggests an active urinary tract infection with possible inflammation or hemorrhage. The findings are typical in cystitis or pyelonephritis, especially if accompanied by symptoms like dysuria or flank pain.

### Question 4: Clinical Scenario

Q: A patient presents with flank pain, fever, and cloudy urine. Lab results show positive leukocytes, nitrites, and the presence of bacteria and casts in microscopy. What is the probable diagnosis?

A: The clinical presentation and lab findings indicate acute pyelonephritis, a bacterial infection of the

kidney. The presence of casts (particularly WBC casts) confirms renal involvement. Immediate treatment with antibiotics and supportive care is necessary.
