End Sub

``
```

This template can be expanded to automate complex tasks.

## Core Concepts and Techniques in CATIA VBA

### Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within the application. The primary object is `CATIA`, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- **ActiveDocument:** Refers to the currently open document, such as a product or part.
- **Products and Parts:** Use `ActiveDocument.Product` or `ActiveDocument.Part` to access the geometry.
- **Selections:** You can select objects within CATIA to manipulate or analyze.

### Common Operations in VBA

- **Creating and Modifying Geometry:** Automate the creation of points, lines, surfaces, and features.
- **Parameter Management:** Read or update parameters within parts or assemblies.
- **File Operations:** Save, close, or export documents via scripts.
- **Iterating through Collections:** Loop through features, bodies, or parameters.

### Example: Extracting Parameters from a Part

```
``vba
```

```
Sub GetParameterValue()
```

```
Dim partDoc As PartDocument
```

```
Dim part As Part
```

```
Dim parameters As Parameters
```

```
Dim param As Parameter
```

```
Set partDoc = CATIA.ActiveDocument
```

```
Set part = partDoc.Part
```

```
Set parameters = part.Parameters
```

```
For Each param In parameters
```

```
Debug.Print param.Name & ": " & param.ValueAsString
```

```
Next
```

```
End Sub
```

```
...
```

This script lists all parameters in the active part document in the Immediate window.

## Practical CATIA VBA Scripts and Tutorials

### Automating a Basic Part Creation

One of the first projects for VBA beginners is automating the creation of a simple part with predefined dimensions.

Steps:

- Open a new part document.
- Use VBA to create a sketch, draw a rectangle, and extrude it into a solid.
- Save the part with a custom name.

```

```
Dim partDoc As PartDocument
```

```
Dim part As Part
```

```
Dim bodies As Bodies
```

```
Dim partBody As Body
```

Dim sketches As Sketches

Dim sketch As Sketch

Dim factory As Factory2D

Dim pad As Pad

Set partDoc = CATIA.Documents.Add("Part")

Set part = partDoc.Part

Set bodies = part.Bodies

Set partBody = bodies.Add()

Set sketches = partBody.Sketches

' Create a new sketch on XY plane

Set sketch = sketches.Add(part.OriginElements.PlaneXY)

Set factory = sketch.OpenEdition()

' Draw rectangle

factory.CreateLine 0, 0, 50, 0

factory.CreateLine 50, 0, 50, 30

factory.CreateLine 50, 30, 0, 30

factory.CreateLine 0, 30, 0, 0

sketch.CloseEdition

' Pad (extrude) the rectangle

Set pad = part.ShapeFactory.AddNewPad(sketch, 20)

part.Update
